CORE ATTENDEE EDITION: Start with 00_START_HERE.md at the pack root. Only the core two-day route is supplied. Optional publishing, dummy website, resource creation, identity/networking and advanced Azure tracker extensions mentioned below are not assigned or included. Use your own extracted path where a command shows C:\YOUR-ATTENDEE-PACK. Do not copy instructor settings.

Azure training - attendee pack

Before the course: read 02_Pre_Course_Setup_And_Prerequisites_Guide.docx. Prepare only the tools required for your chosen route; Day 1 starts with a 15-minute readiness check, not installations.

Open these folders in order

Day 1: individual component exercises in the portal and VS Code. Start with Day 1\00_DAY_1_ORDER.docx, then the numbered route in Basic_Lab_00_START_HERE.docx.

Day 2: mandatory Cost Management, Application Insights and KQL, a short standalone Service Bus exercise, the local tracker, and a team incident/cost investigation. Use Day 2\00_DAY_2_ORDER.docx. Both days run 09:45-17:30; see 00_Two_Day_Timetable.docx.

Labs: shared executable projects, sample SQL/text/KQL files and detailed source instructions. Open the required project folder in VS Code; do not run the entire Labs directory as one project.

Safety and scope

Use fictional data only and only your assigned Azure targets. Resource creation, access changes, deployments and cleanup require the stated approvals.

The current real tracker is local-only, Development-only and in-memory. Do not host it as-is. Day 2 Azure integration is a target until a separately prepared implementation is supplied and verified.

Instructor slides, cue sheets, deployment records, old duplicate guides and readiness reviews are not included in the attendee document folders.
